Water Supply Pumps

Vertical Turbine Pump

B Pump

Main applications

- Water supply systems
- Spray irrigation systems
- Lowering groundwater levels
- Drainage systems
- Seawater systems

Fluids handled

- Water
- Seawater
- Condensate

Operating data

Operating properties

Characteristic		Value
Flow rate	Q [m ³ /h]	≤ 2600
	Q [l/s]	≤ 722
Head	H [m]	≤ 260
Fluid temperature	T [°C]	≤ 105
Speed	n [rpm]	3500
Immersion depth	ET [m]	≤ 120
Borehole diameter	D [mm]	150 to 600
	D [inch]	6 to 24

Design details

Design

- Centrifugal pump
- Vertical installation
- Single-stage or multistage
- Pump shaft, intermediate shaft and top shaft connected via screwed coupling, conical coupling or split muff coupling
- Torque transmission from pump shaft to impeller and couplings via locking sleeves or keys
- Nominal discharge nozzle diameter: 80 mm - 500 mm
- Borehole diameter: 6 inches to 24 inches

Pump casing

- Radially split relative to the shaft
- Suction casing
- Discharge casing
- Pump bowl
- Replaceable casing wear rings

Impeller type

- Single-entry mixed flow impeller without hydraulic balancing
- Impeller wear rings (optional)
- Axially locked in position on the shaft via locking sleeves or stage sleeves

Shaft seal

- Gland packing
- Mechanical seal

Bearings

Shaft guide bearings:

- Product-lubricated plain bearings
- Pump shaft supported by bearing bush in each pump bowl
- Intermediate shaft supported by bearing spiders in bearing bushes installed between column pipes
- Model with shaft enclosing tube: column pipe bearings lubricated by external fluid (water /oil)

Thrust bearings:

- Grease-lubricated rolling element bearings
- Angular contact ball bearings in back-to-back arrangement
- Uncooled

Designation
Example: B10B / 7VN / V1

Designation key

Code	Description	
B	Type series	
10	Borehole size in inches	
B	Impeller type	
	B	$n_q \approx 54$
	D	$n_q \approx 74$
	F	$n_q \approx 82$
7	Number of stages of the hydraulic system	
VN	Installation type	
	VN	Vertical, standard Discharge nozzle flange arranged above-floor at the distributor casing
	VU	Vertical, underfloor Discharge nozzle flange arranged at column (shaft enclosing tube)
V1	Type of drive	
	V1	Direct drive by vertical electric motor

¹ Property class 6.8

Product benefits

- Available with both above-floor discharge and underfloor discharge
- Available with or without shaft enclosing tube
- Shaft sealed by gland packing or mechanical seal
- Available with bearings cooled by the fluid handled
- Drive options: V1/VHS motor, gear unit, belt drive, diesel engine
- Various material variants available
- Available for angled installation
- Suitable for drinking water in acc. with NSF (not NSF-certified)

Product information

Product information as per Regulation No. 1907/2006 (REACH)

For information as per chemicals Regulation (EC) No 1907/2006 (REACH), see https://www.ksb.com/ksb-de/konzern/Unternehmerische_Verantwortung/reach/

Acceptance inspections/tests

Hydrostatic test

The test pressure is normally 1.5 times the operating pressure. The hydrostatic test is carried out using cold water.

Test standards

The test can be performed in accordance with ISO 9906 Class 2B (standard)².

Installation types

- **Wet installation**
The pump is fully submerged, or – for commissioning – submerged at least up to the first-stage impeller, in the fluid handled. The minimum submergence of the first-stage impeller must equal dimension B (minimum water level above the bottom edge of the suction casing). If the pump is equipped with a suction pipe and suction strainer, the liquid level can drop below the level of the first-stage impeller during operation. In this case make sure that the minimum liquid level is 1.0 × the nominal diameter of the suction casing above the top edge of the suction strainer to avoid air intake.
- **Dry installation**
The pump is not submerged in the fluid handled. The fluid handled is supplied to the first-stage impeller through a suction/inlet line. To prevent the pump from being pulled out of its vertical position, connect the inlet line to the suction casing via a special duckfoot bend. The minimum submergence is the same as for wet installation.

² ISO 9906 Class 2B supersedes the following standards: ANSI - Hydraulic Institute Standard, BS 5316 Parts 1 and 2, ISO 3555 Class B, ISO 2548 Class C, DIN 1944 / III, II, I (with negative tolerance).

Column pipe set

Flanged connection

A standard column pipe set comprises:
 1 column pipe with 2 flanges
 1 bearing spider with bearing bush
 1 intermediate shaft with bearing sleeve
 1 intermediate shaft coupling
 1 set of fastening bolts/screws and O-rings

An upper column pipe set comprises:
 1 column pipe with 2 flanges
 1 intermediate shaft coupling
 1 set of fastening bolts/screws and O-rings

Threaded connection

A standard column pipe set comprises:
 1 column pipe with bearing bush
 1 intermediate shaft coupling
 1 set of fastening bolts/screws and O-rings

An upper column pipe set comprises:
 1 column pipe with 1 flanged end and 1 threaded end - max. length: 1220 mm
 1 intermediate shaft coupling
 1 set of fastening bolts/screws and O-rings

Spare parts stock

Ordering spare parts

Always quote the following data when ordering replacement or spare parts:

- Order number
- Order item number
- Type series
- Material variant

Refer to the name plate for all data.

Also specify the following data:

- Part number and description (⇒ Page 47)
- Quantity of spare parts
- Shipping address
- Mode of dispatch (freight, mail, express freight, air freight)

Recommended spare parts stock for 2 years' operation to DIN 24296

Quantity of spare parts for recommended spare parts stock

Part No.	Description	Quantity	Note
211	Pump shaft	1	
212	Intermediate shaft	Z	
213	Top shaft	1	
230	Impeller	1	
271.1	Sand guard	1	
271.2	Sand guard	-	
320	Rolling element bearing	-	
321	Radial ball bearing	-	
382.1	Bearing carrier	1	
384	Thrust collar	1	
400.1	Gasket	1	
400.2	Gasket	S	
400.3	Gasket	1	
400.4	Gasket	2	
400.5	Gasket	1	
412.1	O-ring	1	
422.1	Felt ring	-	
422.2	Felt ring	-	
461	Gland packing (in metres)	-	
502	Casing wear ring	S	
521	Stage sleeve	S-1	From size B14
524	Shaft protecting sleeve	1	If applicable
526	Centring sleeve	-	
529	Bearing sleeve	1	
540	Bush	1	
541	Interstage bush	S-1	Cannot be used for sizes B6, B7, B14 and above
52-1	Clamping sleeve, complete	S	Up to and including size B12
544	Threaded bush	1	
545.1	Bearing bush	1	
545.2	Bearing bush / rubber	S	
545.3	Bearing bush	1	
851	Conical coupling	-	
852	Screwed coupling	Z + 1	
920.1	Nut with two flats	-	From size B14
931.1	Lock washer	-	From size B14
931.2	Lock washer	-	

Installation depths
Possible column pipe connections

List of components

Part No.	Description	Part No.	Description
13-17	Strainer	545.1./2./3	Bearing bush
13-18	Elbow	554	Washer
106	Suction casing	561	Grooved pin
107	Discharge casing	591	Tank
112	Pump bowl	595	Anti-vibration pad
144	Discharge elbow	636.1./2	Lubricating nipple
145.1./2	Adapter	75-3.1/3.2	Nozzle
211	Pump shaft	710.1./2./3./4	Pipe
212	Intermediate shaft	711.1./2./3	Column pipe
213	Top shaft	731.1./2./3./4./5	Pipe union
230	Impeller	733.1./2	Pipe clamp
271	Sand guard	754	Valve ball
320	Rolling element bearing	758	Screen
331	Bearing pedestal	81-92	Cover plate
341	Drive lantern	89-4	Shim
350	Bearing housing	840	Coupling
360	Bearing cover	852.1./2	Screwed coupling
383	Bearing spider	866	Coupling bolt
400.1./2./3./4./5./6	Gasket	894	Mounting bracket
411.1./2./3./4	Joint ring	898	Foundation block
412.1./2	O-ring	901.1./2./3./4./5./6./7./8./9	Hexagon head bolt
451.1./2	Stuffing box housing	902.1./2./3./4./5./6./7	Stud
452	Gland follower	903.1./2./3./4	Screw plug
461	Gland packing	904.1./2	Grub screw
502	Casing wear ring	914.1./2./3	Hexagon socket head cap screw
505	Loose collar	916	Plug
524	Shaft protecting sleeve	920.1./2./3./4./5./6./7./8./9/ .10/.11/.12	Nut
529.1./2	Bearing sleeve	924	Adjusting nut
531	Locking sleeve	930	Safety device
541	Interstage bush	931	Lock washer
550	Disc	932	Circlip
544	Threaded bush	940.1./2	Key
