High-pressure Pumps

High-pressure Centrifugal Pump

Multitec/Multitec-RO

- Feed water
- Hot water
- Condensate
- Fire-fighting water
- Solvents
- Lubricants
- Fuels
- Cooling water
- Water/oil emulsions
- Seawater
- Thermal water

Operating data

Operating data

Characteristic	Value
Sizes	DN 32 - 200
Flow rates	Q [m³/h] ≤ 850 Q [l/s] ≤ 236
Heads	H [m] ≤ 630, (1000 ¹⁾)
Fluid temperature	T [°C] -10 to +200
Operating pressures	p ₂ [bar] ²⁾ ≤ 63, (100 ¹⁾)

Designation

Example: Multitec³⁾ A 32/8E-2.1 12.65 (SP)

Key to the designation

Code	Description
Multitec	Type series
A	Installation type
32	Nominal discharge nozzle diameter [mm]
8E	No. of stages / impeller combination
2.1	Hydraulic system
12	Material code
65	Seal code
SP	Code for special variants (optional)

Example: Multitec-RO⁴⁾ A 100/5-8.1 31.80

Key to the designation

Code	Description
Multitec-RO	Type series
A	Installation type
100	Nominal discharge nozzle diameter [mm]
5	Number of stages
8.1	Hydraulic system
31	Casing material (duplex stainless steel)
80	Seal code

Design details

Design

- Multistage centrifugal pump in ring-section design
- Horizontal installation in long-coupled or close-coupled design

Fluids handled

- Water
- Drinking water

1) Only for individual sizes/designs

2) The sum of inlet pressure and shut-off head must not exceed the value indicated.

3) Code: MTC

4) Code: MTC-RO

- Vertical installation in close-coupled design or with cardan shaft

Pump casing

- Suction casing: axial or radial
- Radial suction casing and discharge casing: nozzles can be turned in steps of 90°
- Flanges to EN and ASME (holes and flange facing)
- Identical seal housing for gland packing and mechanical seal (separate component)
- Stage casings, discharge casings and seal housing sealed by confined O-rings

Drive

- 50 Hz and 60 Hz electric motor
- Can be driven by diesel engine or turbine

Impeller type

- Closed radial impeller with multiply curved vanes

Bearings

- Fixed bearing, drive end: rolling element bearing
- Radial bearing, non-drive end: either plain bearing or rolling element bearing, depending on the type of installation
- Lubrication:
 - Rolling element bearing grease or oil lubricated

- Plain bearing lubricated by fluid handled

Coupling

- Long-coupled designs: flexible coupling with or without spacer
- Close-coupled design up to DN 65 with rigid coupling, larger designs with flexible coupling without spacer

Coupling guard

- Standard coupling guard, cylindrical
- Optional: tread-proof coupling guard

Shaft seal

- Uncooled gland packing, with or without barrier fluid
- Standardised mechanical seal to EN 12756, cooled or uncooled, single or double
- Cartridge seal

Materials

- Casing: grey cast iron, nodular cast iron, steel, stainless steel, duplex stainless steel, super duplex stainless steel
- Hydraulic system: grey cast iron, bronze, stainless steel, duplex stainless steel, super duplex stainless steel

Technical description

Designs A, B, C and D

Installation type	A ⁵⁾	B ⁵⁾	C ⁵⁾	D ⁶⁾
	<ul style="list-style-type: none"> ▪ Horizontal design, baseplate mounted ▪ Only one shaft passage (drive end) ▪ Rolling element bearing at the drive end / plain bearing on the suction side ▪ Axial suction nozzle (block flange up to size 50) ▪ Drive on discharge side 	<ul style="list-style-type: none"> ▪ Horizontal design, baseplate mounted ▪ Only one shaft passage (drive end) ▪ Rolling element bearing at the drive end / plain bearing on the suction side ▪ Radial suction nozzle ▪ Drive on discharge side 	<ul style="list-style-type: none"> ▪ Horizontal design, baseplate mounted ▪ With two shaft passages ▪ Rolling element bearings at the drive end and on the suction side ▪ Drive on discharge side 	<ul style="list-style-type: none"> ▪ Horizontal design, baseplate mounted ▪ With two shaft passages ▪ Rolling element bearings at the drive end and on the discharge side ▪ Drive on suction side
H/Q range:	Complete range	Complete range	Complete range	Complete range
Multitec-RO: Design A only			DN 200: For installation types C and D only	
Drive	Electric motor, diesel engine, turbine			
Axial thrust balancing	By balance drum ⁷⁾			
Q _{max} ⁸⁾	850 m ³ /h			
H _{max}	630 m (1000 m ⁹⁾)			
P _{2 max}	63 bar (100 bar ⁹⁾)			
t _{max}	-10 °C to +200 °C, Multitec-RO up to 45 °C			
Shaft seal	Uncooled gland packing, cooled or uncooled mechanical seal; single or double cartridge seal			
Material	Casing: <ul style="list-style-type: none"> ▪ Grey cast iron, steel, stainless steel for Multitec ▪ Duplex and super duplex stainless steel for Multitec-RO Hydraulic system: <ul style="list-style-type: none"> ▪ Grey cast iron, bronze, stainless steel for Multitec ▪ Duplex and super duplex stainless steel for Multitec-RO 	Casing: grey cast iron, nodular cast iron ¹⁰⁾ , steel, stainless steel Hydraulic system: grey cast iron, bronze, steel, stainless steel		

5) The direction of rotation is clockwise, seen from the motor end.

6) The direction of rotation is counter-clockwise, seen from the motor end.

7) For small numbers of stages without balance drum the axial thrust is completely absorbed by the thrust bearing.

8) Note: The indicated Q values apply to 50 Hz; for 60 Hz values refer to the individual characteristic curves.

9) Only for individual sizes/designs

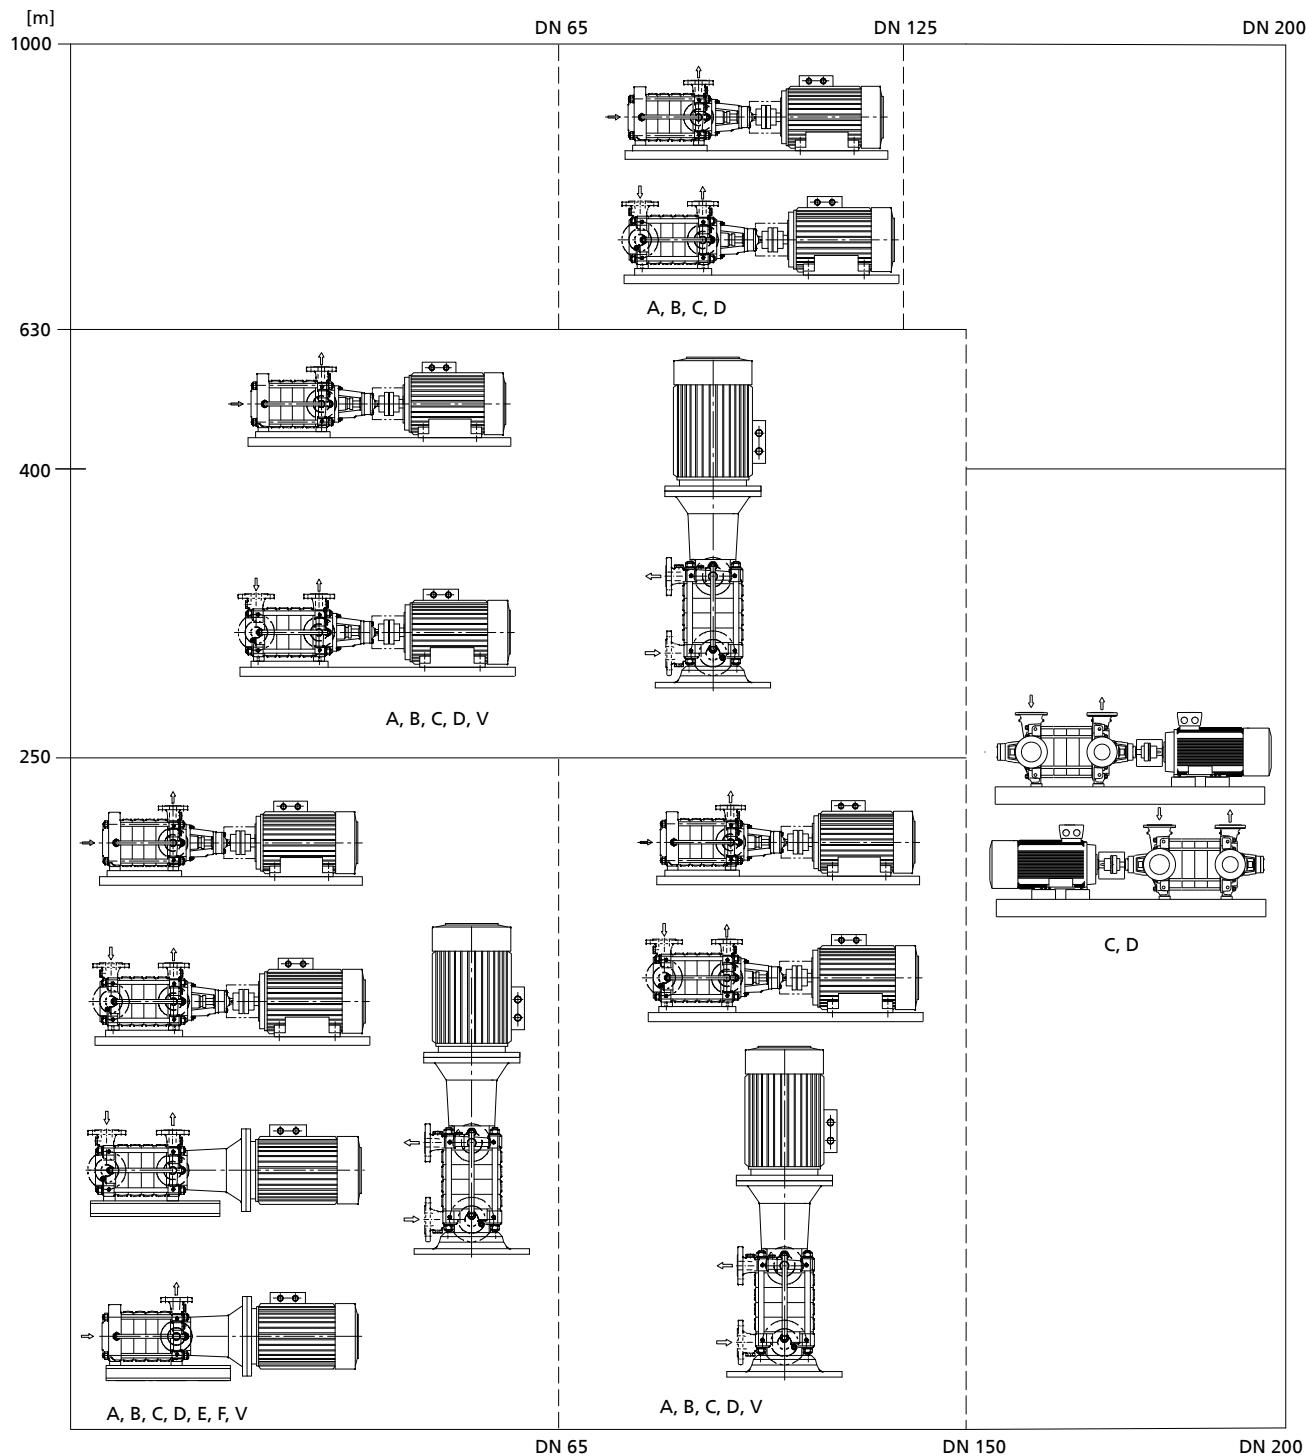

10) Only for DN 200

Designs E, F and V

¹¹⁾ For Multitec 32, Multitec 50 and Multitec 65 the motor bearings on the coupling side are fixed bearings

Operating ranges by installation type

Operating ranges by installation type

Product benefits

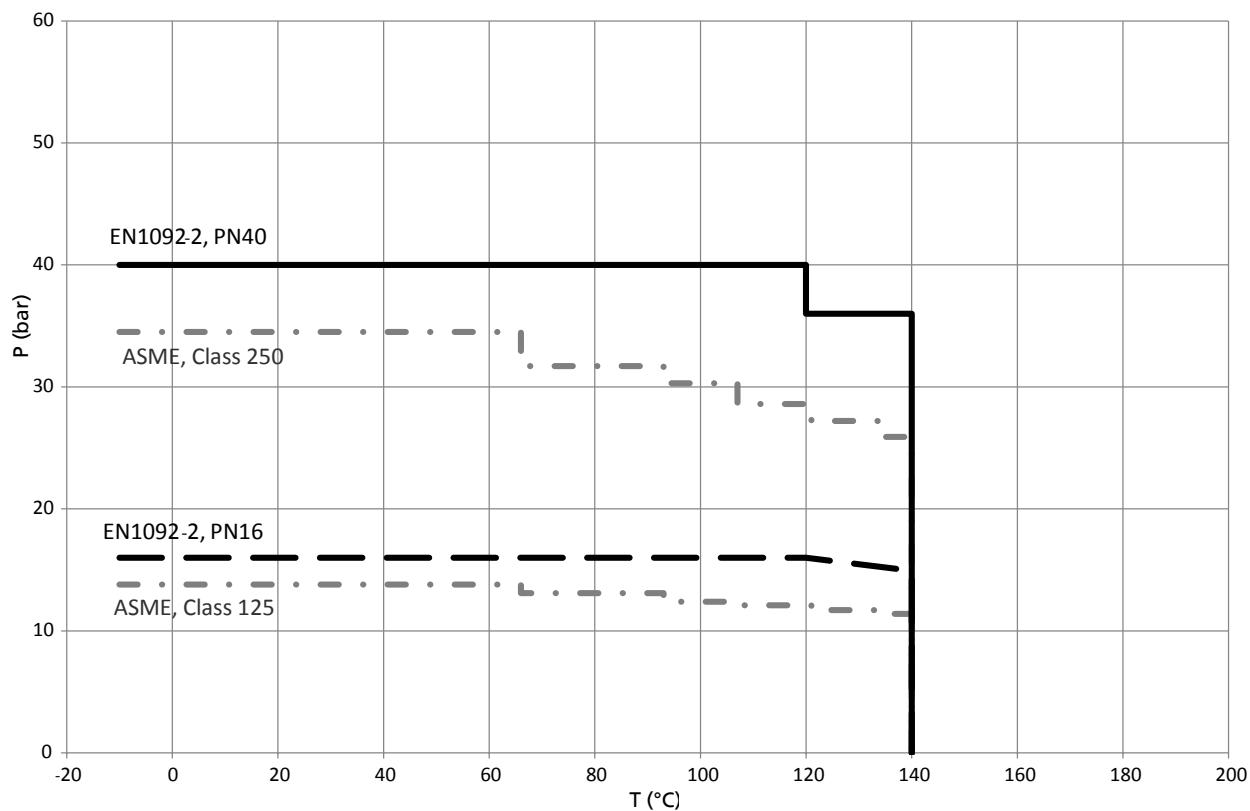

- Space-saving compact design with axial inlet and product-lubricated plain bearing
- Flexible, best matching adaptation to system condition by variety of installation types and variable nozzle position
- Low NPSH value, improved suction behaviour and operating reliability for suction lift operation by special suction impeller
- Optimised efficiencies and reduced operating costs by newly developed hydraulic system
- Versatile use by broad range of installation types, materials and shaft seals
- Optimum selection for fluid to be pumped and operating conditions by large choice of materials
- High resistance by casing wear rings / closing discs made of corrosion-resistant material, economical and easy to replace
- Shaft protected from wear by shaft protecting sleeve made of stainless steel
- Axial thrust balancing by balance drum
 - Low bearing load at changing operating condition
 - Long life of rolling element bearings and shaft seals
 - Use of standardised seals due to lower pressure in the shaft seal chamber
- Longer service life, higher operating reliability, lower operating costs, maintenance costs and investment costs by maintenance-free, robust plain bearing made of silicon carbide, also suitable for operation with frequent starts/stops.
- Service-friendly by bearing assembly and mechanical seal being easy to dismantle

FluidFuture energy efficiency concept developed by KSB

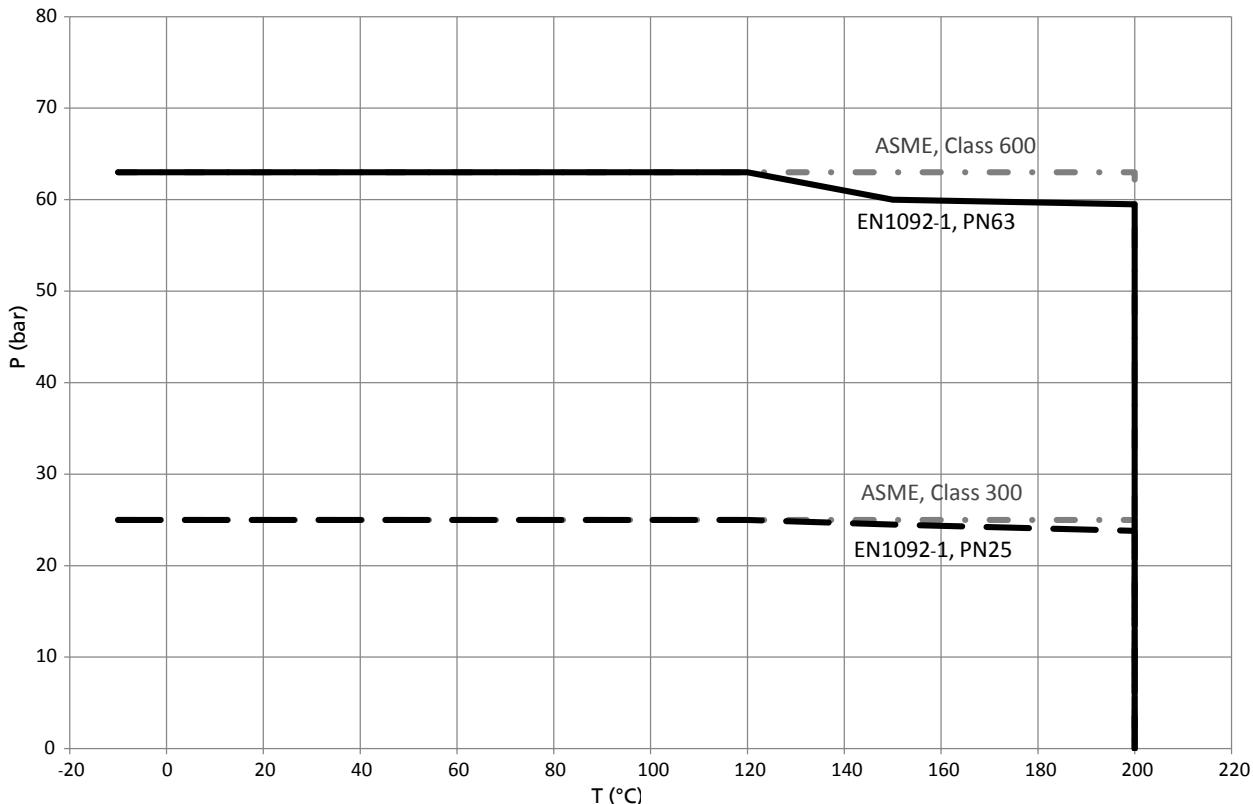

<http://www.ksb.com/fluidfuture>

Acceptance tests / Guarantees**Certificates / inspections/ acceptance tests on request:**

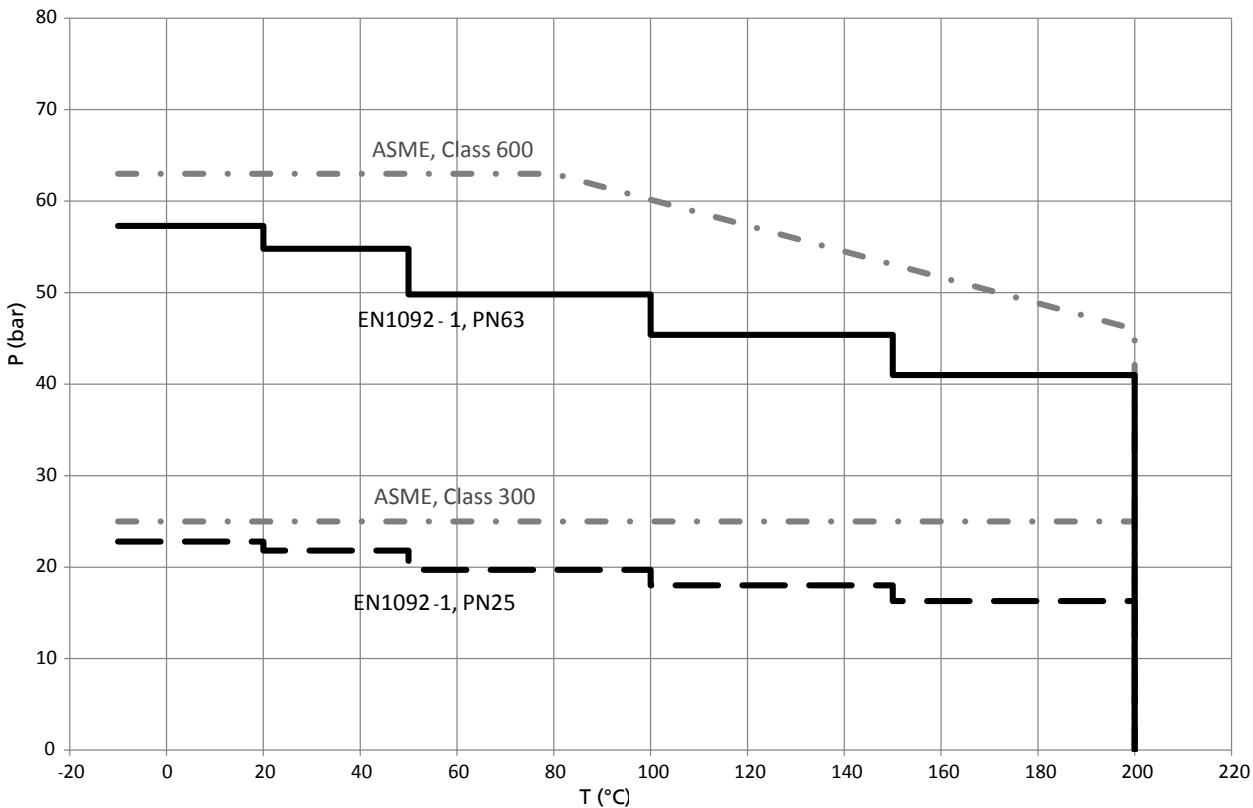

- Test reports 2.2 to EN 10204 for pressure-retaining components, shaft and impellers
- Hydrostatic pressure test of pressure-retaining components
- Balancing test
- Hydraulic tests:
 - Performance test to ISO 9906 or Hydraulic Institute
 - NPSH test
 - Vibration test
 - Bearing temperature measurement
- Strip test
- Dimensional inspection
- Coating inspection
- Final inspection and testing

Pressure and temperature limitsMaterial JL1040 (GJL-250), EN-GJS 400-15¹²⁾¹²⁾ Only for fluid temperatures up to 60 °C

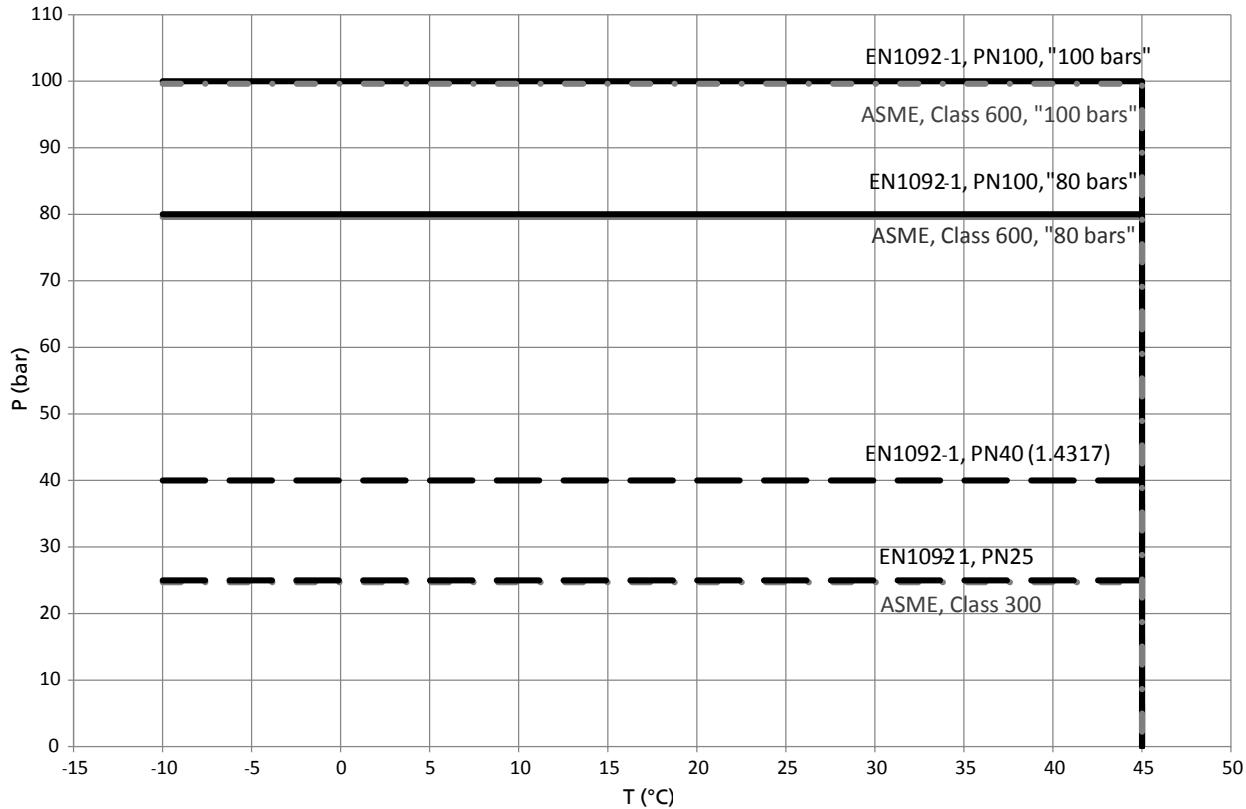

Material GP240GH+N (1.0619+N)

Material 1.4408

Material 1.4317, 1.4517, 1.4469

Seal codes for the mechanical seal

Available versions of mechanical seals:

- Balanced and unbalanced
- Uncooled up to 140 °C or cooled up to 200 °C
- Single or double
- Cartridge mechanical seal

Key to the material code of the mechanical seal

Code	Material
A	Carbon graphite, antimony-impregnated
B	Carbon graphite, resin-impregnated

Code	Material
Q1	Silicon carbide, solid, sintered without pressure
Q12	Silicon carbide, shrink-fitted, sintered without pressure
U2	Tungsten carbide, Ni-bonded (solid)
U3	Tungsten carbide, NiCrMo-bonded
E	EPDM rubber
E4	EPDM peroxide-cured
V	Fluoroelastomer, e.g. Viton
V5	Fluoroelastomer, e.g. Viton (90 shore)
M	Hastelloy
G	CrNiMo steel

Seal codes for mechanical seal versions

Seal codes for single mechanical seal (supplier: Burgmann)

Mechanical seal	Material	Static seals	Uncooled				Cooled ≤ 200 °C	P _{max} [bar]

630	82	83	-	-
710	82.5	84	-	-

Noise characteristics for other ratings/speeds on request.

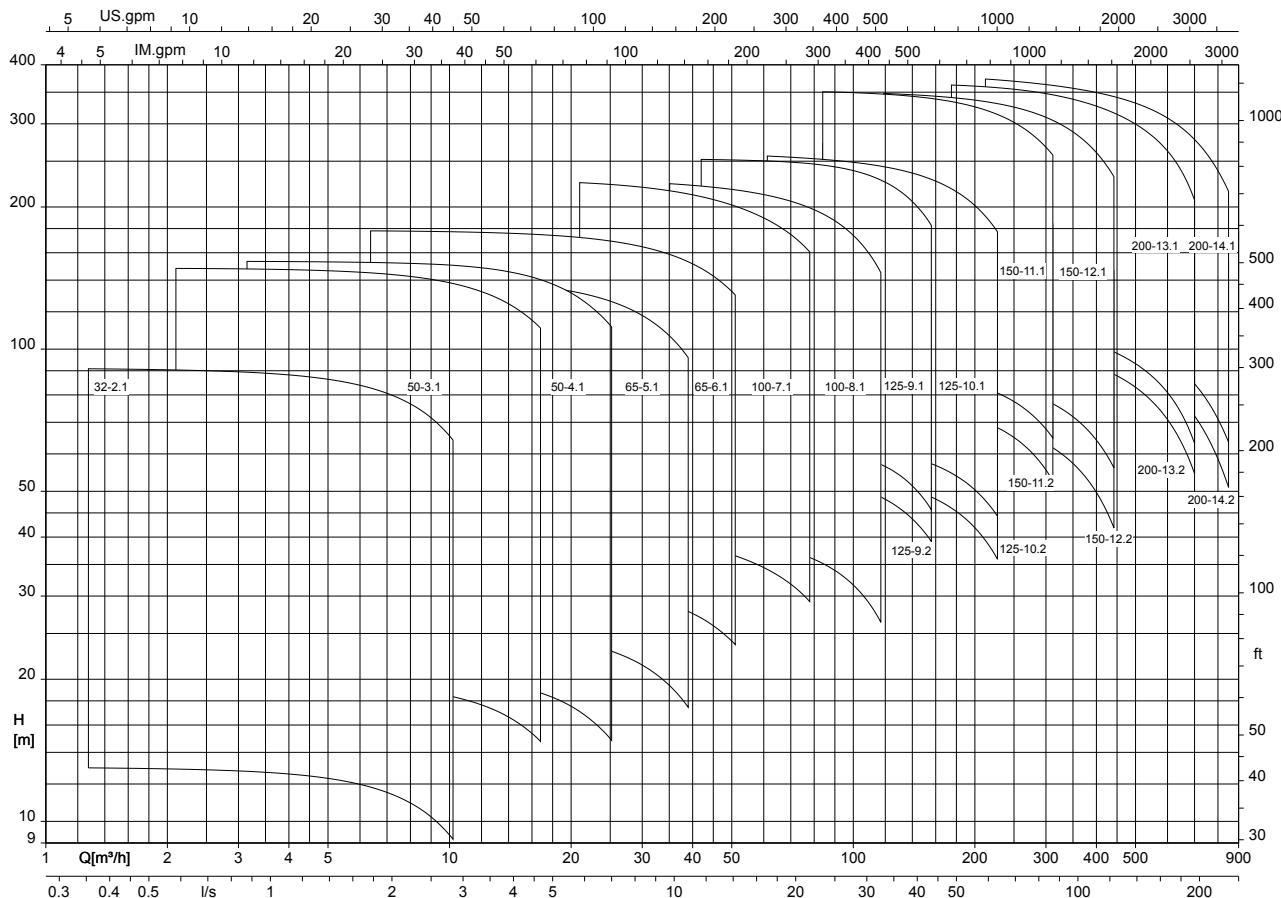

Noise characteristics can only be guaranteed after consultation with the design/engineering department.

Selection charts

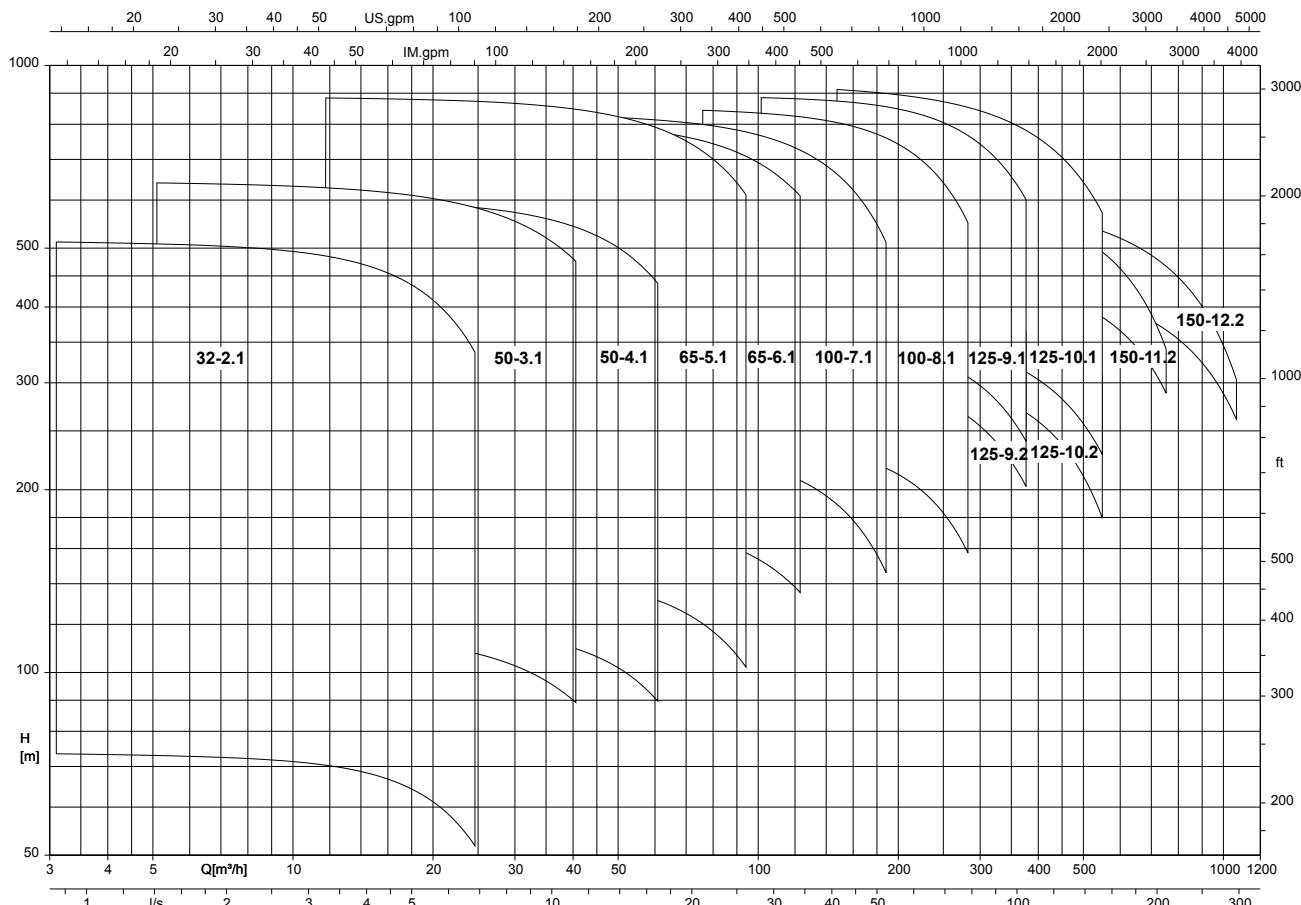

Multitec/Multitec-RO, 50 Hz, n = 2900 rpm

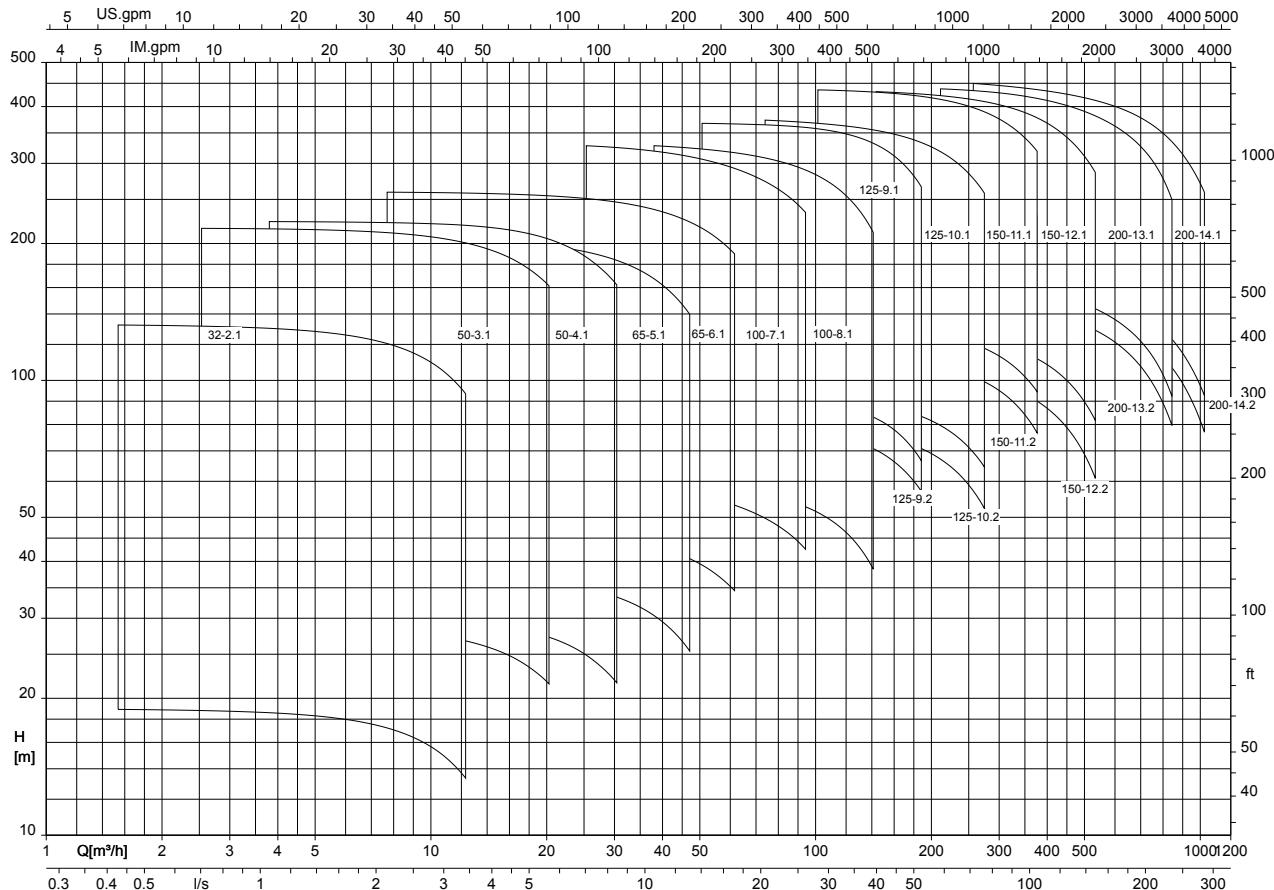

Multitec/Multitec-RO, 50 Hz, n = 1450 rpm

Multitec/Multitec-RO, 60 Hz, n = 3500 rpm

Multitec/Multitec-RO, 60 Hz, n = 1750 rpm

Drive

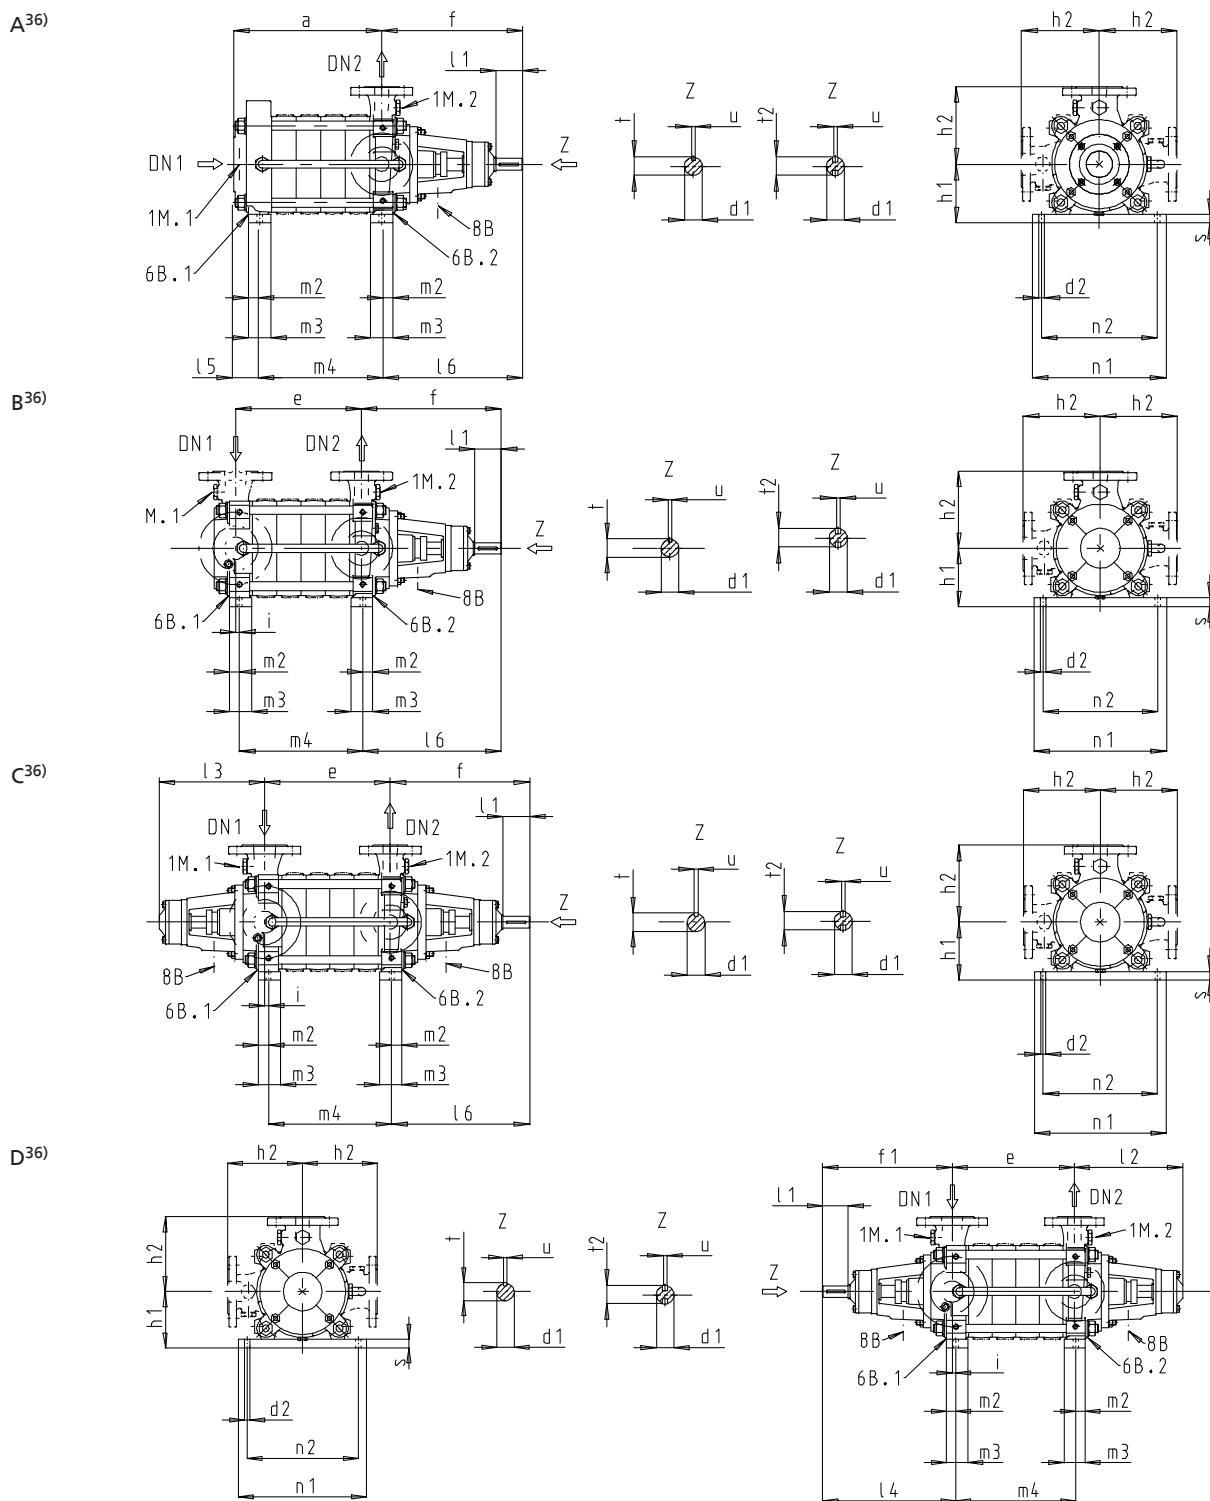

Driven by a three-phase current squirrel-cage motor of the following types of construction:

Types of construction

	Included
Installation types A, B, C, D	IMB3
Installation types E, F	IMV1 up to 45 kW, for higher ratings IMB35
Installation type V	IMV1
Enclosure	IP 55/IP 23
Thermal class	F
Direction of rotation of the pump	<ul style="list-style-type: none"> ▪ Installation types A, B, C, E, F, V: clockwise, seen from the drive end ▪ Installation type D: counter-clockwise, seen from the drive end
Options	Special voltages, explosion protection, insulated bearing, standstill heater

42) Depending on the make

43) For size 32: discharge flange DN 1½" can also be supplied as DN 1½" on request.

44) For Multitec 100 and 125 only

Nozzle positions

The nozzle position is variable. The required nozzle position has to be selected when completing an order in the selection program.

i For all pump sizes and material variants nozzle position 0-0 (or illustration 2 for vertical installations) is only available for versions with 3 or more stages. An exception is DN 150 in

material variants 10, 11, 12, 13 and 14, for which nozzle position 0-0 is available for versions with 2 or more stages. The nozzle position is generally defined seen from the drive.

Horizontal installation (A, B, C, D, E and F)

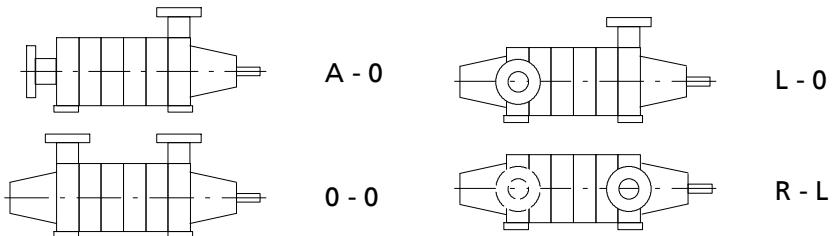

The first letter defines the suction nozzle, the second letter the discharge nozzle.

A - axial suction nozzle

0 - suction and/or discharge nozzle on top

R - suction and/or discharge nozzle on the right

L - suction and/or discharge nozzle on the left

Vertical installation

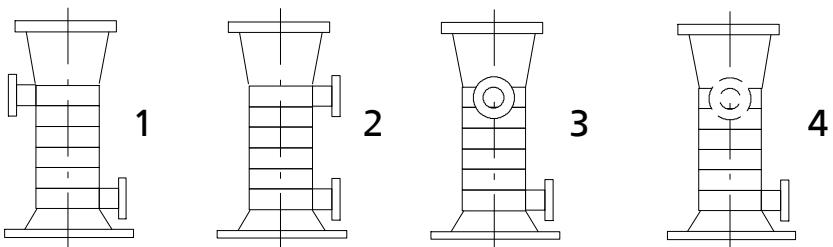

The suction nozzle (at the bottom) serves as a fixed point. The illustration number indicates the offset position of the discharge nozzle compared to the suction nozzle.

1 - offset by 180°

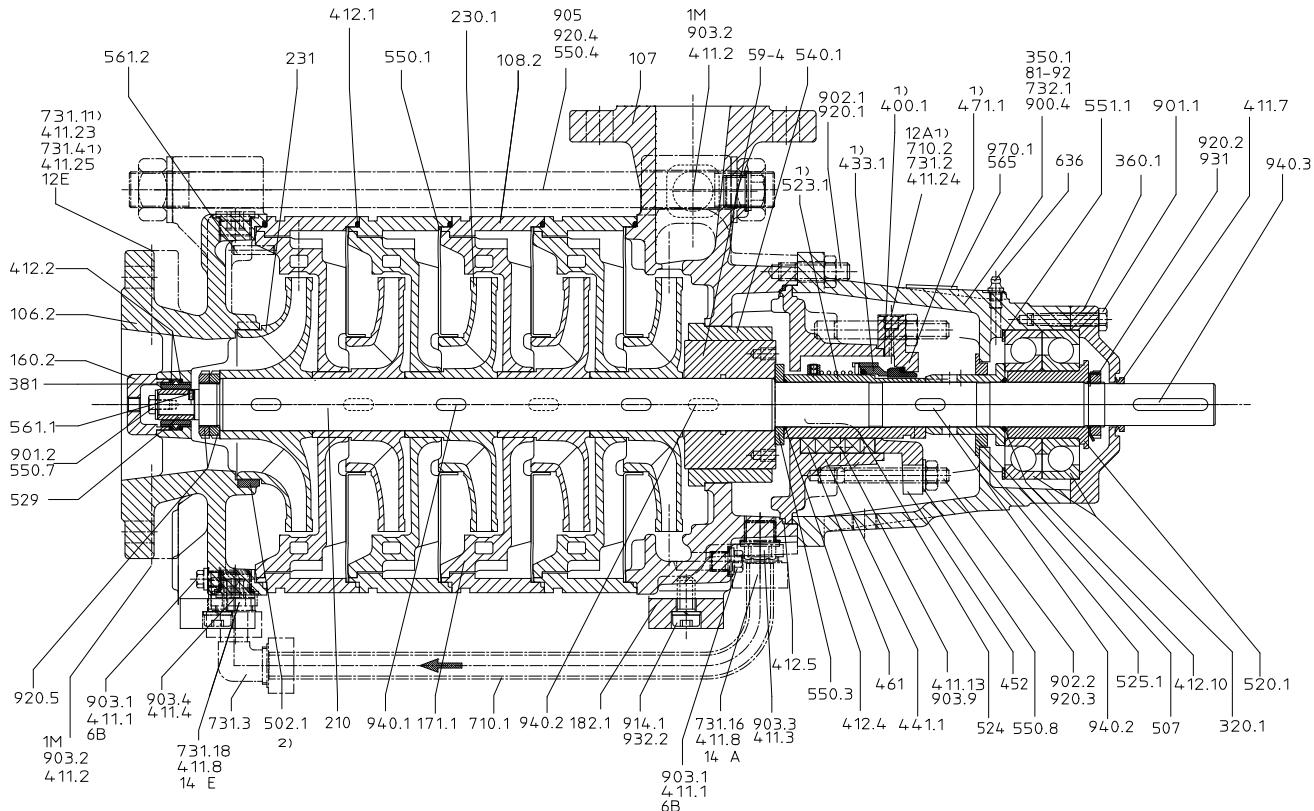

2 - aligned

3 - 90° offset to the left

4 - 90° offset to the right

General assembly drawing with list of components (example)

Multitec, installation type A, size 65-100
